

Flip Drive

A Serviceman's Most Useful Tool.

Two nut drivers in one.

Eliminates one tool from your pouch.

Each set of Flip Drive tools includes an ergonomic hand tool, and a tool for use in a drill chuck or quick release.

Each tool is supplied with a reversible socket.

The shaft of each tool has a magnetized tip to retain a screw during installation or extraction.

The ends can be cleaned of metal particles because of their removability.

A positive ball-bearing snap keeps the socket from accidentally detaching.

P/N: T7411

The Flip Drive is specifically designed for driving #8 & #10 sheet metal screws.

The Flip Drive's dual-use socket drives 1/4" hex with one end, and 5/16" hex with the other.

Easy size change – just flip the socket.
